

Ashlee Cooper

IT Basics (T)

Having an understanding of how to navigate your laptop independently will be essential during your service year(s) with Saga whether you're in-person or live online. While the IT Department will be there to help you whenever you need it, we want to make sure you have the tools and knowledge you'll need. During this session, you will learn:

- The basics involved with your Saga-issued Chromebook
- Best practices for storing files in Google Drive
- How to keep your computer, information, & files safe

This course will take you about **45 minutes** to complete. You can scroll down below or press "Start Course" above, to begin.

Importance of IT

AC Ashlee Cooper

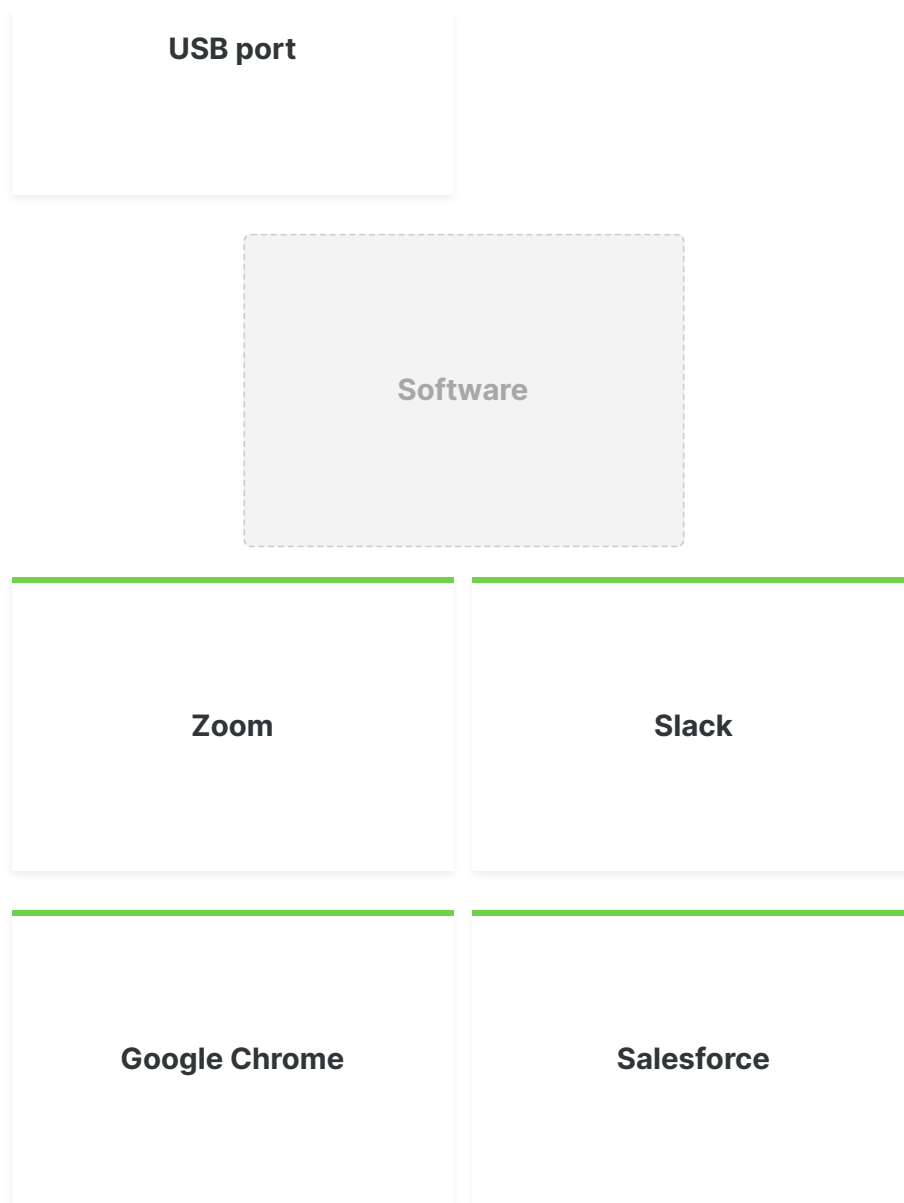

What's information technology (IT), anyways?

Well, it's the use of systems, like computers, for storing, retrieving, and sending data and information. The system's hardware and software work together for it to operate.

Your computer's **software** contains the **instructions that tell the computer how to function**, which includes **system, utility, and application software**. Your computer's **hardware carries out those instructions** and is the **physical aspect of a computer**.

Let's make sure you have the hang of it. Sort the **9** examples of hardware and software into the piles below.

Hardware	
laptop	headset
Chromebook	mouse

Now let's make sure that you know how to operate your hardware and software. This starts with setting up your Chromebook.

CONTINUE

Setting Up Your Chromebook

If you haven't already, you'll receive a Chromebook from Saga to make sure you can access the resources you'll need to help you be successful in your role. Since Chromebooks are somewhat different than other laptops, we want to make sure that you can easily navigate .

Let's start with taking a look at the external ports and switches that are located on the left & right sides of each Chromebook. Unsure about any of them? Click on the (+) symbols below to learn more.

We'll start with the right side.

MicroSD slot

This slot reads memory cards that enable you to store, manage, share, or access information.

USB-Type A

This port connects a USB device, provides high-speed data transfer, and even when the computer is in Sleep mode, charges most products such as a cell phone, camera, activity tracker, or smartwatch.

USB-Type C

This port has a couple of uses.

- This is where you'll plug in your Chromebook's charger. The light will turn on to indicate that it is charging.
- You can also connect a USB device that has a Type-C connector, such as a cell phone, camera, activity tracker, or smartwatch to provide power or transfer data.

Audio-out (headphone)/Audio-in (microphone) combo jack

This connects optional powered stereo speakers, headphones, earbuds, or a headset.

Note: When you have a device connected, it will disable your Chromebook's speakers.

Now the left.

USB- Type C

This port has the same uses as the USB-Type C on the other side of your Chromebook. As a reminder:

- This is where you'll plug in your charger. The light will turn on to indicate that it is charging.
- You can also connect a USB device that has a Type-C connector, such as a cell phone, camera, activity tracker, or smartwatch to provide power or transfer data.

Power button

- When your Chromebook is off, press this once to turn it on.
- When it is on, press this button briefly to initiate sleep mode. You can press it again to exit sleep mode.
- If you press & hold the power button it will turn off, but you may lose any unsaved work.

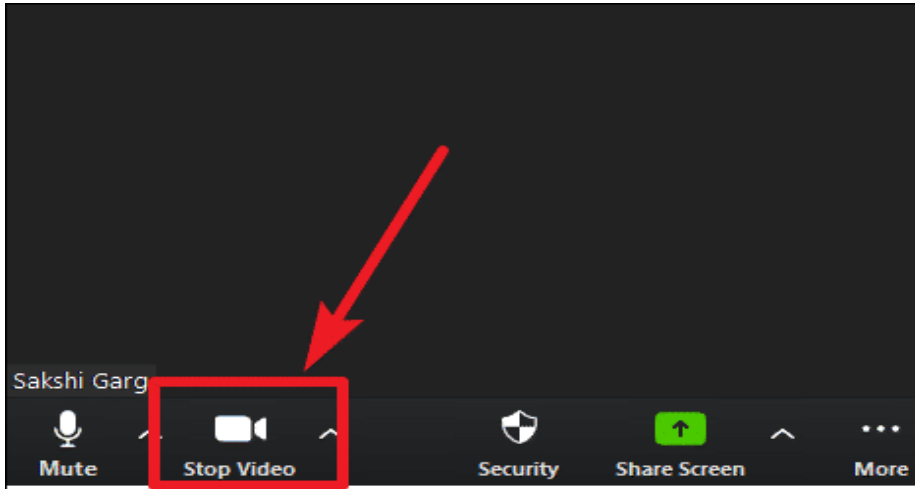

Volume button

This is one of the few ways you can turn the volume up or down while using your Chromebook.

Webcam privacy switch

When this switch is on, it disables your webcam. Even if your video icon is on, as in the image, above, your webcam will still be off. Be sure to turn your privacy switch off before entering a meeting.

Now, let's take a look inside! The **2-minute** video, below, will show you how to set your Chromebook up and teach you some useful tips. You'll need your Saga email account in order to log in. If you don't have access to your Saga email account yet, reach out to helpdesk@saga.org.

 YOUTUBE

Video Tutorial: Getting Started ...

Video Tutorial: Getting Started with Chromebook

Watch this video to learn how to get started with your new Chromebook. For more information, visit the Chromebook Help Center at: www.support.google.com/chromebook.

VIEW ON YOUTUBE >

Note: If you see an account with the Saga Logo labeled "Saga Education", please notify helpdesk@saga.org. This is a guest account and indicates that the IT team needs to adjust the settings for your computer. Anything done in this account will be reset whenever you close the lid of your laptop or log out.

All set up? Double check by using the checklist below.

☐

Your Chromebook is fully charged or charging.

☐

You've connected your Chromebook to Wi-Fi.

☐

You've logged into the Chromebook using your Saga email account.

☐

You know how to turn off your webcam's privacy switch.

Now what if you have to reset your Chromebook? Press continue to learn how.

CONTINUE

Resetting Your Chromebook

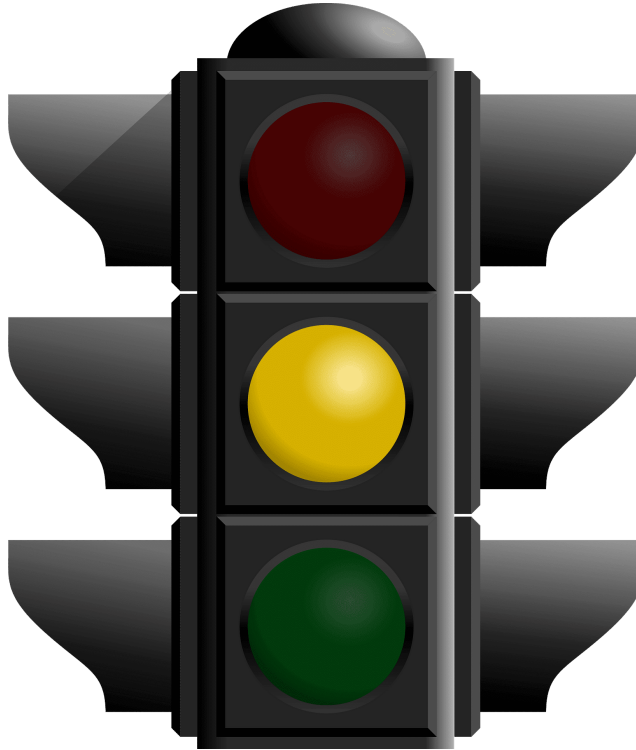

Factory resetting or powerwashing your Chromebook is a **good way to clear up space on your machine and start fresh.** It will **erase all user data saved locally to the device, including all the files in the Downloads folder.** It also erases most non-user-related device information, only preserving a few diagnostic and operational pieces of data. **It will not de-enroll your device from Saga.** Let's walk through how you can do it.

How to factory reset your Chromebook

Resetting your Chromebook is simple. Click start to walkthrough the 4 steps you can follow if you ever need to do so.

Step 2

Make sure you have to reset

Slow down, you may not always have to reset your Chromebook. But here are some reasons you should:

- You see the message "Reset this Chrome device"
- You're having unresolvable problems with your user profile or settings
- You've tried restarting your Chromebook and it's still not working normally

If you're unsure you can always reach out to the IT team first on Slack [#help-technical-support](#) or by email helpdesk@sagaeducation.org

Step 3

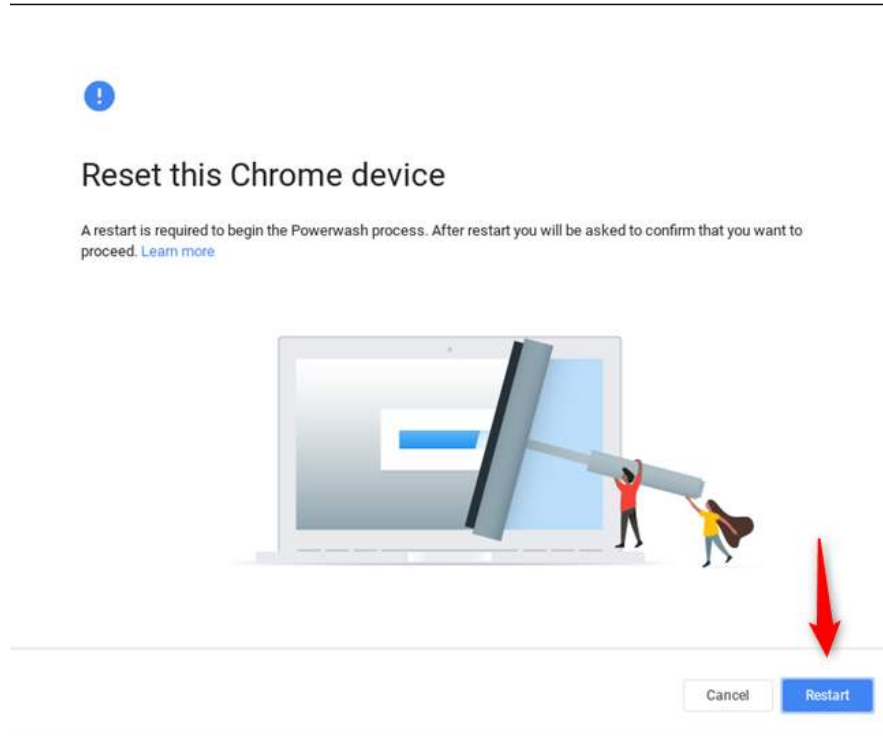

Back up your important files and information

All of the information on your Chromebook's hard drive, including your settings, apps, and files will be erased. Storing your files onto your Google Drive will make sure that they are safe. We'll go over how to do that soon.

Step 4

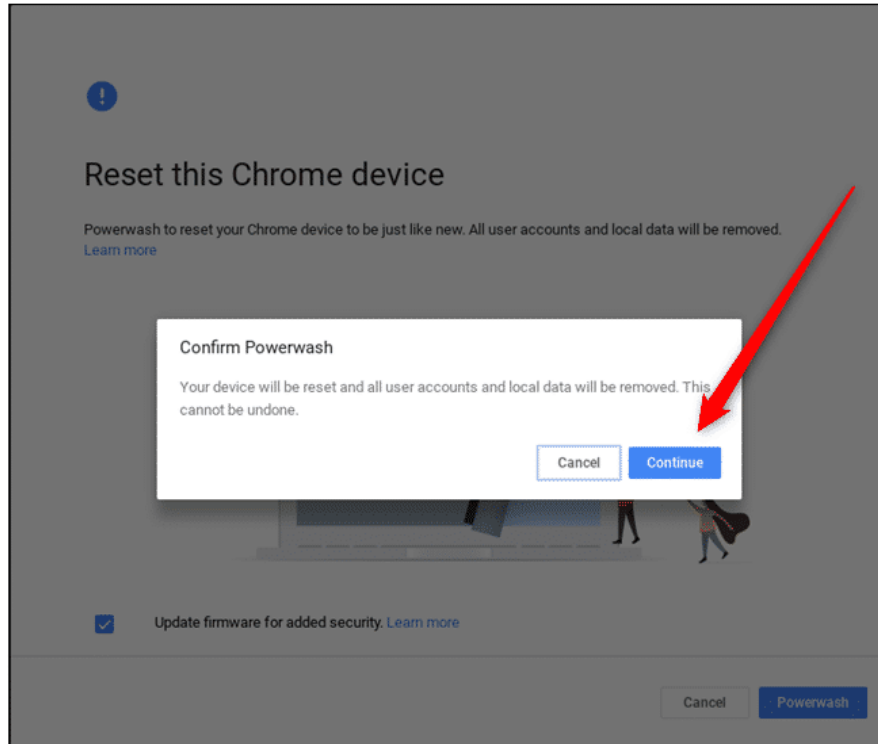

Reset

On the sign-in screen, press and hold **Ctrl + Alt + Shift + r**. Then select restart.

Step 5

Powerwash, if necessary

If it asks you if you want to powerwash, select powerwash and any security updates it has. Continue on for it to begin. Your screen should go dark and the computer will restart. The screen will come back telling you it is powerwashing itself.

You're ready to go!

When it is done, it will bring you to a screen that will allow you to set up the Chromebook, at that point you'll be good to go.

Quick knowledge check- if your files are backed up onto Google Drive, they will not be erased when you reset your Chromebook.

☐ True

☐ False

SUBMIT

Let's make sure you know how to store those files on your Google Drive.

CONTINUE

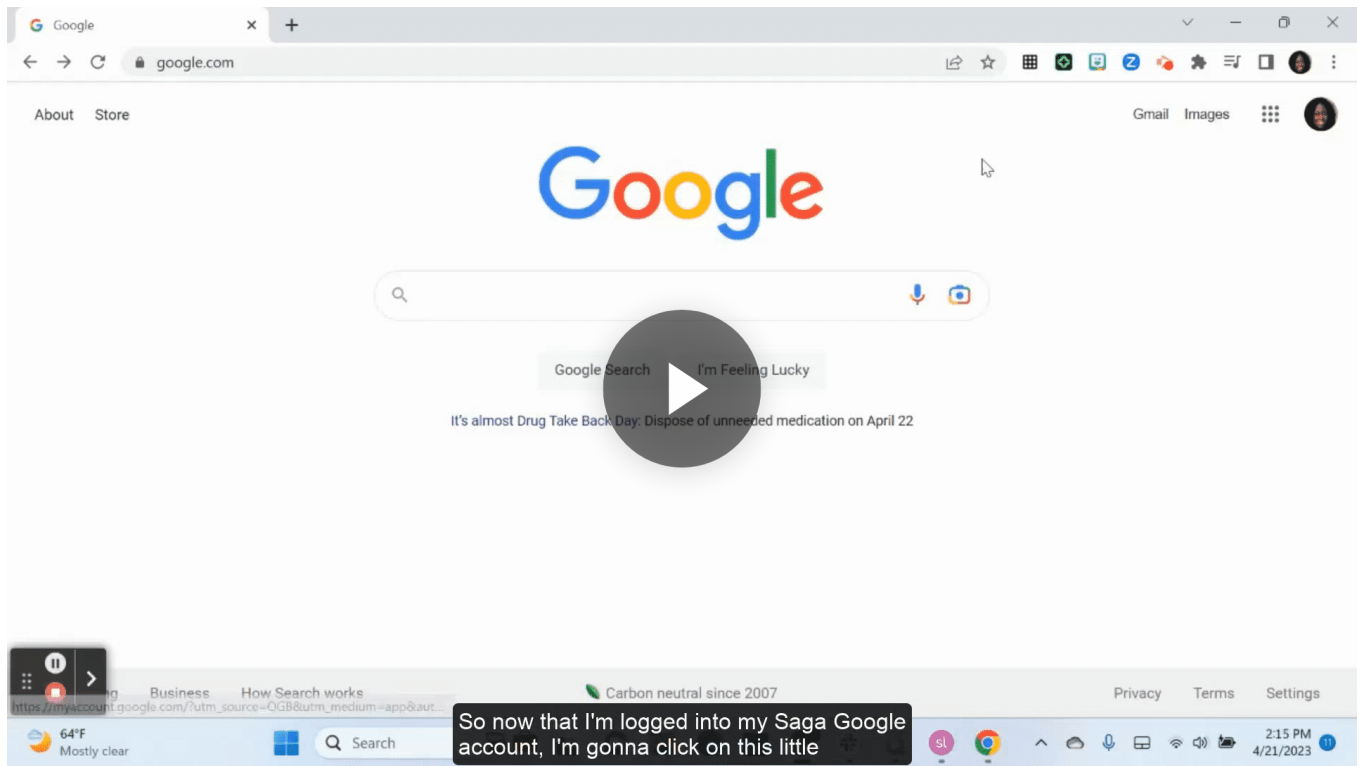

Storing Your Files on Google Drive

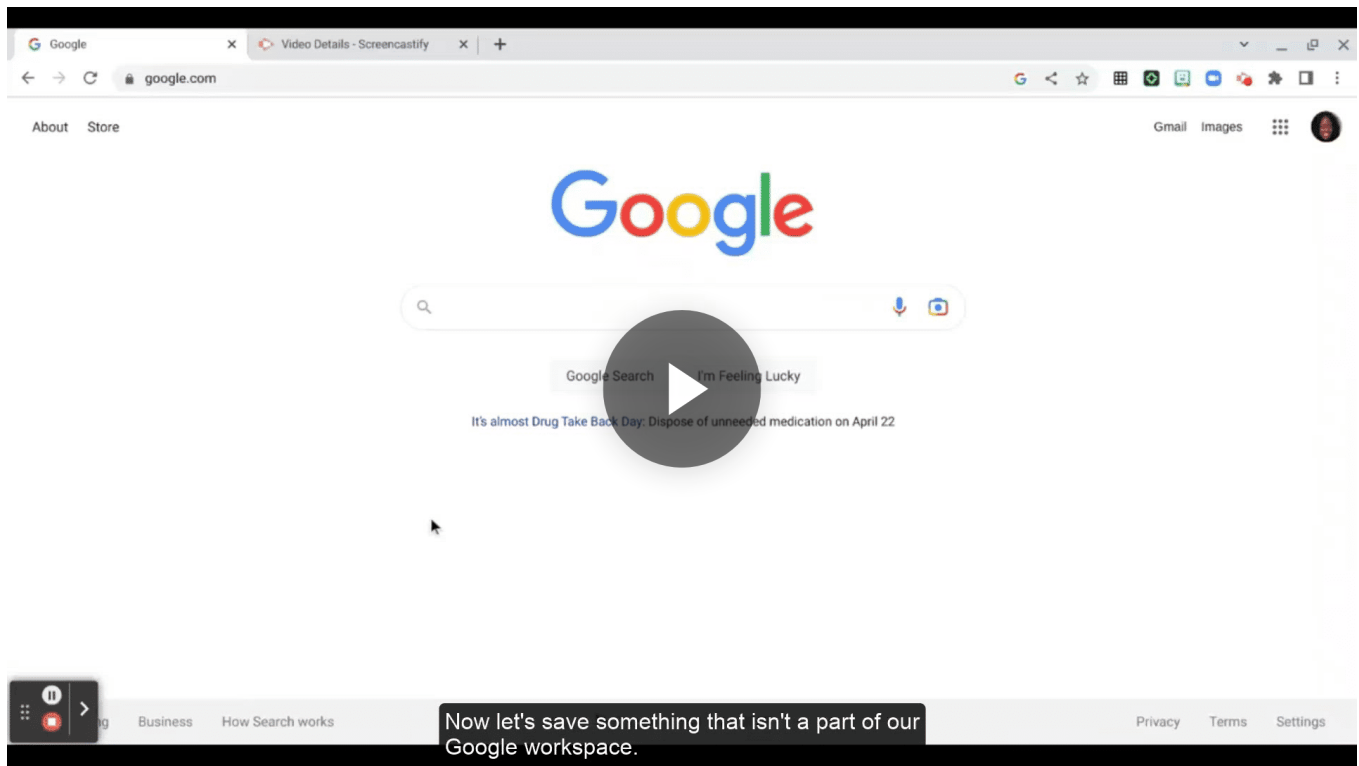

Google Drive uses cloud technology, which allows you to store your files securely and open or edit them from *any* device. This could be from another Chromebook, a browser on your personal laptop, or a mobile app. You will be using Google Drive to collaborate on documents and share resources with your team throughout the school year.

Not confident in saving files in Google Drive? No problem! The next two videos will show you how, if you need it.

Let's start with a Google document.

Now, let's take a look at saving a gif from the web.

Want to try it out on your own? Use the image to your left.

Here are some reminder instructions:

1. Right click on the image by pressing your touchpad with 2 fingers then go to "save image as...".
2. Expand your "Google Drive" folder then expand your "My Drive" folder.
3. Choose a folder to save the image into or create a new folder (bottom left corner).
4. Rename the image then click save.

What if I forget to save my downloaded files onto Google Drive?

No worries! You can always back up your local files to your Google Drive. Watch the [3 minute video](#), below, which will walk you through how to do so.

Backing up Local Files

Click on the link to the right for a copy of these instructions for future reference. You can bookmark the page by clicking on the star on the right side of your browser's search bar.

CLICK ME!

Now we'll focus on other ways to keep your device and files safe.
Press continue when you're ready to go.

CONTINUE

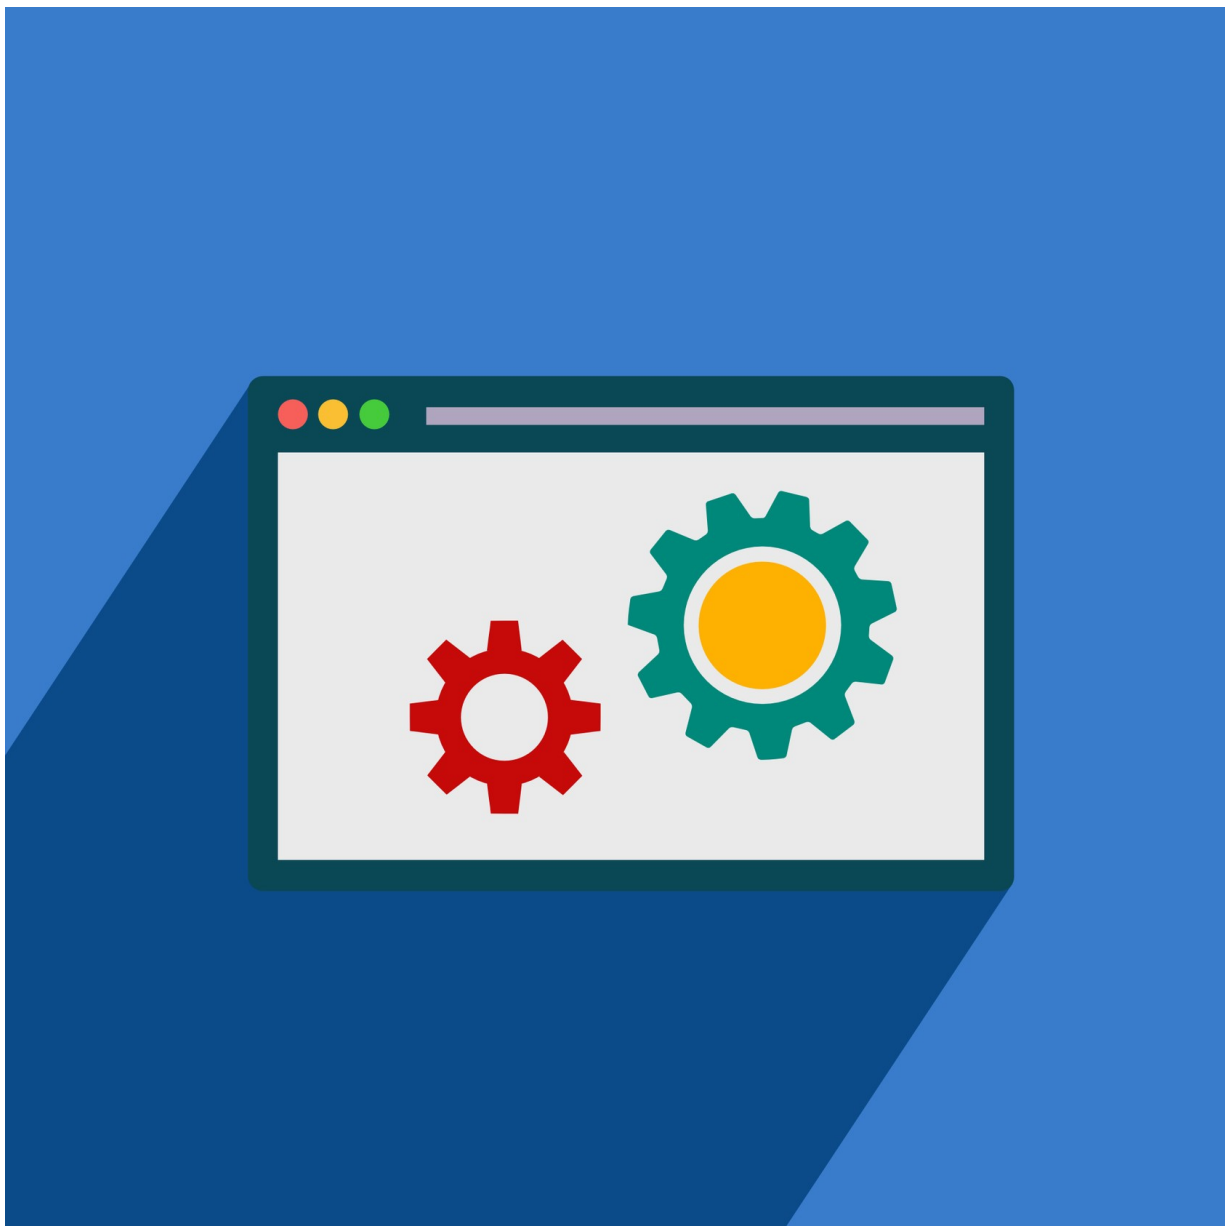

How to Care for Your Device

As you know, taking care of your devices internally and externally helps them last longer. Click on each tab below to review some best practices for keeping your Chromebook in good condition.

Maintaining your device

- **Power down your device (not put in sleep mode) when you are finished.** This will allow your computer's hardware to rest and reset.
- **Install system updates when prompted and actively check for updates at least once a month.** Out-of-date programs can slow down your computer and cause errors, so make sure you're updating your programs whenever you see the "Update available" window pop up. You can also check for updates manually by opening your computer's Settings or Help menu and pressing the 'Check for Updates' button.

Preventing damage —

- **Use a properly-sized, cushioned laptop case.** Whatever you use to carry your laptop around (be it a case, a bag, or something you made yourself), make sure that it holds the laptop snugly and provides some cushion. This way, in the event you drop the case, your laptop is protected.
- **Avoid leaving the laptop close to the edge of a desk or table or on the floor.** Accidents happen. Any object on the edge of a table can fall off on its own or be knocked off, while any object on the floor can be stepped on or kicked, which can cause it to break easily.
- **Protect your LCD screen (display).**

- Hold and lift the computer by its base, not by its display.
- When you shut your laptop, make sure there are no small items, such as a pencil or small ear-phones, on the keyboard. These can damage the display screen if the laptop is shut on them.
- Avoid touching the screen with pens or any pointer that can scratch the surface. Avoid placing heavy materials, such as books, on top of your laptop. These can damage the screen if the laptop is shut on them.
- **Use and store your laptop in well-ventilated areas.** Laptops used in enclosed areas with no air flow are subject to overheating.
- **Carefully plug in and take cords out of sockets.** Always look at the symbols on the laptop carefully before inserting devices. Jamming a USB into an HDMI port or vice versa could damage the sockets, making it impossible to use them again.

Keeping it clean —

- **Keep liquids and food away from your laptop.** If coffee, tea, or water is a must while you're working, use a cup with a lid.
- **Keep the laptop lid closed as often as you can.** This helps to limit the amount of dust that can settle on the keyboard, saves battery life and prevents the keyboard from an accidental coffee spill—a leading cause of laptop damage.
- **Try to keep the laptop on a flat, clean surface.** Repeated use of a laptop on a cloth surface (like a bed or sofa) will cause the fans to suck up the dust and debris, ultimately blocking the fan.
- **Always have clean hands when using your laptop.**

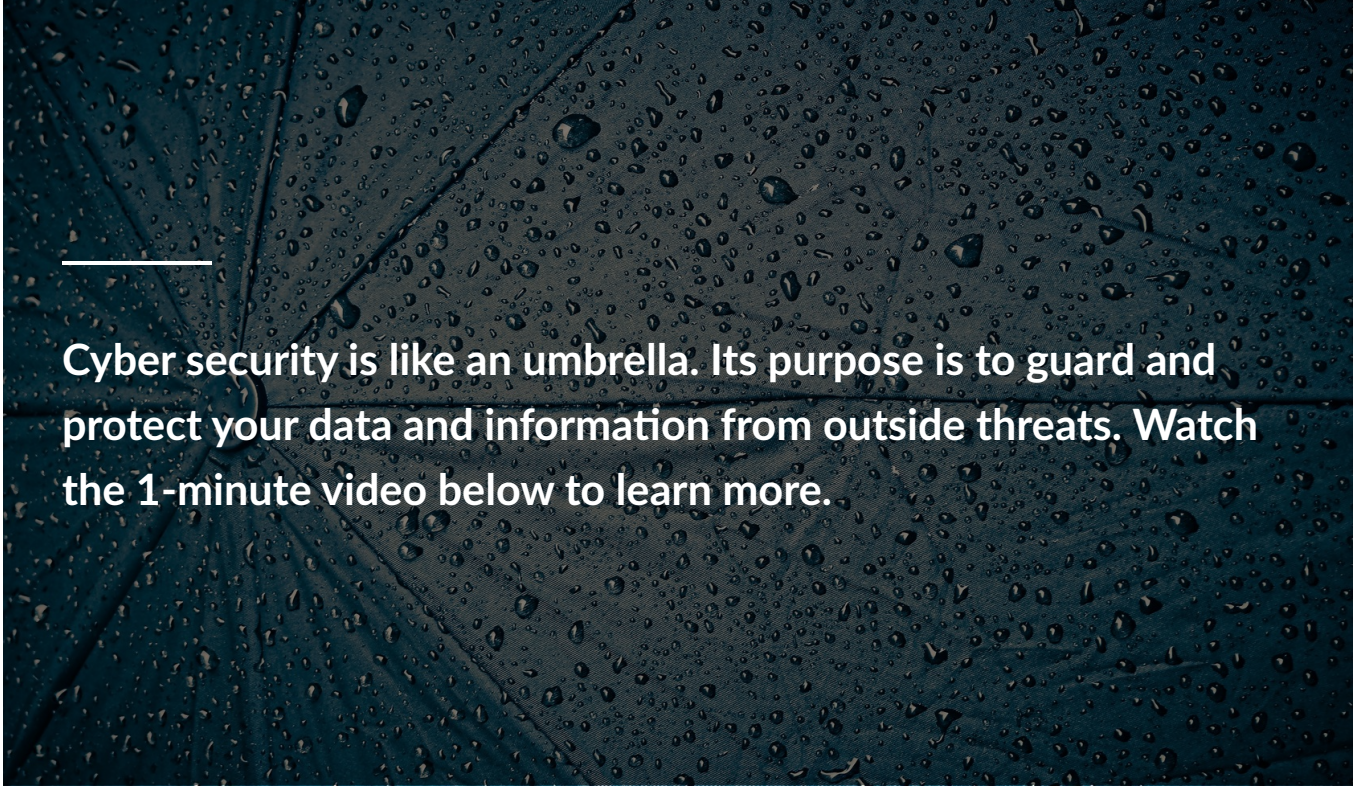

Now that you know how to keep your devices in good condition, let's look at how you can protect yourself from computer hackers.

Cyber Security Explained

Cyber Security Explained

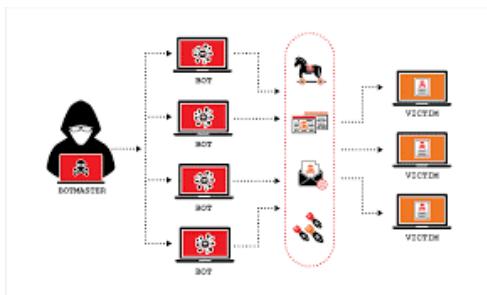

[VIEW ON YOUTUBE >](#)

Types of Cyber Attacks or Threats

Hackers target companies or individuals for financial gain, moral reasons, or revenge. It's important that you know about the 3 main types of cyber attacks. Click on each of the flip cards to review them.

Malware. This involves the installation of unwanted programs or software on your system without your permission such as trojan malware or spyware.

Denial of Service (DoS). The goal of this attack is to overwhelm the network to the point that it cannot function. It stops users from accessing the service or network.

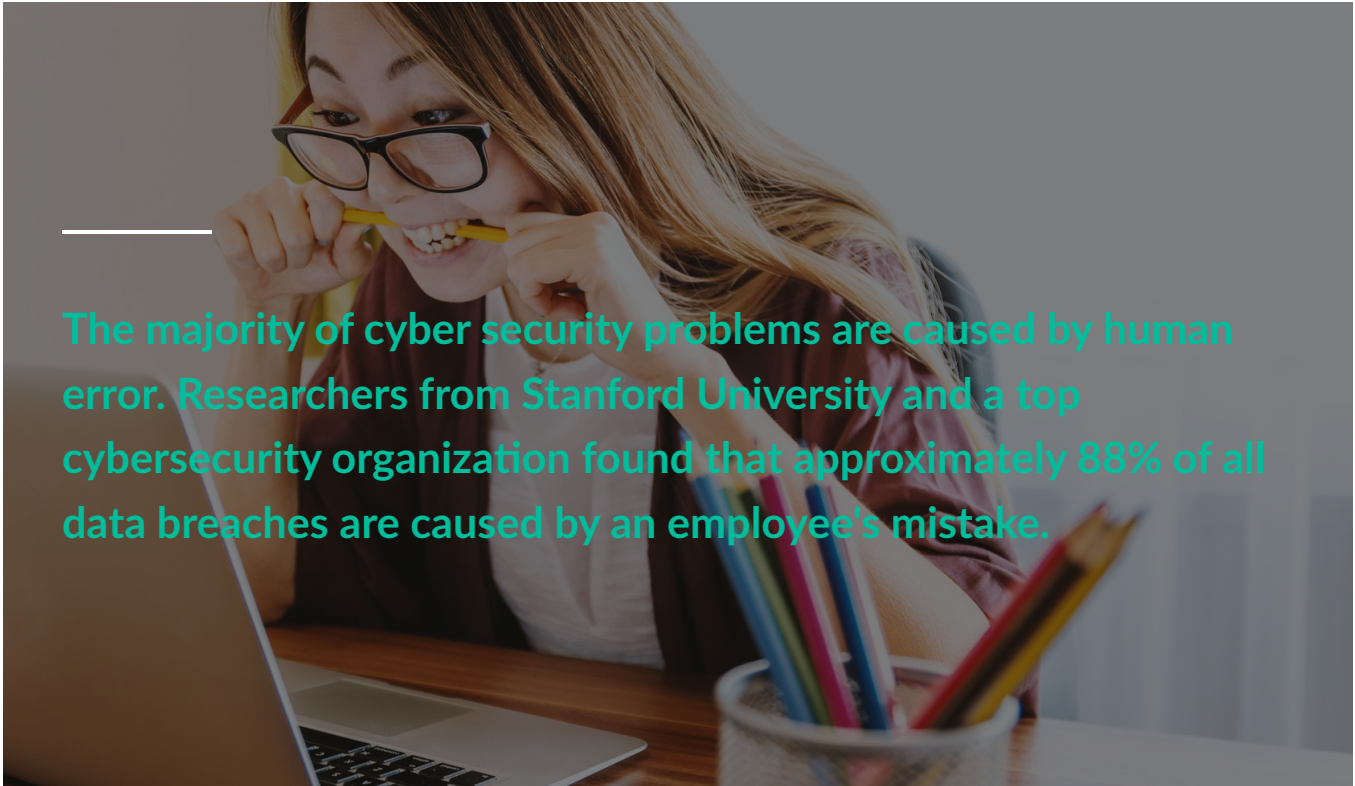

Social Engineering. This type of attack uses psychological manipulations to deceive users into giving up their information or making bad security choices. The most common type being phishing.

Protecting your online accounts from hackers is your responsibility. But don't worry, we have your back with some best practices for you to stay safe while online.

CONTINUE

Defending Yourself

AC Ashlee Cooper

The majority of cyber security problems are caused by human error. Researchers from Stanford University and a top cybersecurity organization found that approximately 88% of all data breaches are caused by an employee's mistake.

Protect Your Email Account

Imagine you had to leave all of your money in a locker for 30 minutes. How would you protect it?

Your email account may not seem as important, but it can give hackers access to information that is as important. Let's take a look at a couple of ways you can protect your account.

1. Two-Step Verification

Also known as two factor authentication; this **adds an extra layer of security to your Google account**. Instead of just asking for a password, the site may have you enter a pin, respond to a confirmation text, or use face or fingerprint id. It's required for your Saga account, but can also be set up for your personal accounts.

Enabling 2-Step Verification

If you haven't done so yet, use the link to set up 2-Step verification using your smartphone. If you don't have a smartphone, reach out to helpdesk@saga.org.

INSTRUCTIONS

2. Create Strong Passwords

These are the most important things to consider when you're creating a strong password:

☐

At least 12 characters long but 14 or more is better.

☐

A combination of uppercase letters, lowercase letters, numbers, and symbols.

Not a word that can be found in a dictionary or the name of a person, character, product, or organization.

Significantly different from your previous passwords.

Easy for you to remember but difficult for others to guess. Consider using a memorable phrase like "6MonkeysRLooking^".

But how? Click to flip each card to find a solution to each common mistake.

Mistake #1:
The password uses personal
information.

But it makes it so easy to remember.

Solution: Use symbols, uppercase letters, and a more random order. And rather than using personal info like family names, try combining a character from a movie with a type of food.

Mistake #2:
The password is too simple or short.

Thinking of passwords is a sport! (Okay, not really.) **Solution:** Try using a password generator or creating an acronym for a phrase you like and adding symbols and numbers.

Mistake #3:
Using the same password on multiple accounts.

But, it can be challenging to think of just one! **Solution:** Try using a password manager. This will help you store your passwords securely online without having to remember them or write them down.

Simon has to create a new password for his Gmail account. Which passwords might be strong enough to keep his account secure? Select all that apply.

Identify Phishing

Phishing like fishing?

(Well they do want you to take the bait.) Phishing is the fraudulent practice of sending emails or other messages pretending to be from reputable companies in order to induce individuals to reveal personal information, such as passwords and credit card numbers.

Click on the markers below to identify some red flags you may find in a phishing email sent to your Saga account.

IT Team <helppdesk@sagaedu.org>

To: mwilliams@sagaeducation.org, nwilliams@sagaeducation.org, 4 Cc

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

IT Team <helppdesk@sagaedu.org>

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

Illegitimate or Unfamiliar Senders

Can you notice the issue with the sender's email address? The hacker may use a familiar name or company to get you to think it's a legit email.

Always hover over the name to see if the email address domain matches the company's domain exactly. There might be a slight discrepancy in the domain. Saga Education uses @sagaeducation.org and @saga.org.

IT Team <helppdesk@sagaedu.org>

To: mwilliams@sagaeducation.org,

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

Mass Emails

Hackers are more interested in quantity than quality. Sometimes they'll email multiple people with hopes that at least one person will make an error.

Ask yourself:

- Were you cc'd on a group email?
- Do you know the other contacts in the group?
- Is the group an unusual group of people?

If you are unsure who the other individuals are then it may not be a legit email.

IT Team <helppdesk@sagaedu.org>

To: mwilliams@sagaeducation.org, nwilliams@sagaeducation.org, 4 Cc

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

Creating a False Sense of Urgency

Hackers will use words or key phrases in their subject line that may cause you to bait you into opening the email. This can include:

- Urgent/Important
- Request
- Follow-up
- Payment Status
- Invoice Due

They may continue trying create this false sense of urgency in the body of the email.

IT Team <helppdesk@sagaedu.org>

nwilliams@sagaeducation.org,

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

A General Salutation

How are you being addressed in the email? Is the company using your name or title, or a general salutation that can fit anyone? They might also address you as a valued customer or member.

IT Team <helppdesk@sagaedu.org>

To: mwilliams@sagaeducation.org, 
nwilliams@sagaeducation.org,

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

Hyperlinks

Wait! Don't be too quick to click a link in an email that seems suspicious. Hover over the email first to see the site it wants to lead you to. Hackers can use that link to gain personal information from you. Always think before you act and if you're still unsure, reach out to your IT team.

IT Team <helppdesk@sagaedu.org>

To: mwilliams@sagaeducation.org, nwilliams@sagaeducation.org, 4 Cc

Subject: URGENT!! Account Compromised

Dear Account Holder,

Your account has been comprised. [Click this link](#) to confirm your identification and change your password. Failure to do this will result in losing your account.

Sincerely,

Saga IT Team

Spelling, Grammar, or Punctuation Errors

Can you spot some of the spelling errors in this email? Yes, we may all make typos sometimes, but this can also be a sign that the person sending the email may be a hacker.

What part of an email should you check for red flags?

- ☐ The subject line
- ☐ The hyperlink
- ☐ The entire email

SUBMIT

Get Help

If it seems phishy, it probably is phishy. Don't be afraid to reach out to Saga's actual IT team at helpdesk@saga.org before clicking on a link you're unsure of. It's better to be safe than sorry.

But, mistakes do happen. What if you do fall victim to phishing? Here are some reactive steps you can take.

1

Report it. Reach out to your IT team and let them know that you may have been scammed. No need to be ashamed. They'll be able to provide you with follow up steps.

2

Change your passwords. The sooner you change your passwords the better. The hackers may not be able to access your accounts if you change your passwords immediately.

3

Disconnect from the internet & scan your system for malware. The links in phishing emails can also install malware onto your system. It's important to scan your system and back your files up.

Let's wrap up this session! Don't worry, this link is safe to click.

What's Next?

We want to continue building your understanding.

Later today, you'll learn more about navigating your Google Workspace and receive a refresher on laptop security. You'll also receive some additional resources that you can save on your drive.

Lesson 9 of 10

Quiz

Ashlee Cooper

Let's see what you've learned so far! If you don't get a question right the first time, don't worry- you can try again. You'll have to score at least 75%.

Question

01/04

Which is a type of cyber attack? Select all that apply.

- ☐ Malware
- ☐ Denial of Service
- ☐ Fishing
- ☐ Phishing

Question

02/04

True or False. Enabling 2-step verification does not add an extra layer of security to your Google account.

☐ True.

☐ False.

Question

03/04

Match each step with the action you'll have to do to reset your Chromebook.

 Make sure you have to reset	Step 1
 Reset your device	Step 2
 Power wash your device, if necessary	Step 3
 Back up your important files and information	Step 4

Question

04/04

The purpose of _____ security is to protect your data & information from outside threats like hackers.
